

Instructions For Lyman's Case Preparation Kit (#7777796)

Case Preparation Kit

Use the wood handles (8) to hold the interchangeable cleaner (3 & 4) and reamer (1 & 2) bits to clean primer crimp from military brass so it can be reprimed. The cleaners and reamers are furnished in "small" and "large" bit diameters to precisely fit primer pockets. A clean primer pocket allows easy, even primer seating. Fouling and residue should be removed from inside the case necks by installing the appropriate brush (5, 6, or 7) in

a handle (8) and running it into each case mouth. If your caliber isn't covered in the furnished brushes, any brush with an 8 x 32 thread may be substituted. Use the deburring tool (9) to deburr each case mouth inside and out before reloading for the first time and after each trimming. This operation is done only once per trimming.

Key	Part Description	Part #
1	Large Reamer	7990365
2	Small Reamer	7990366
3	Large Cleaner	7990372
4	Small Cleaner	7990373
