

Ground Stake Popper Target

1. **Slide the bolts into the holes on the target plate.**
2. **Slide a spring onto each bolt.**
3. **Place the bracket over the springs, making sure the stomp plate faces toward the back of the target.**
4. **Thread the locknut onto each bolt and tighten until the ends of the bolts just pass through the head of the locknut. (Do not over-tighten — the springs need room to flex.)**
5. **Step the target assembly into the ground using the stomp plate for leverage.**

Part Number

PT-GS-12	PT-GS-12-RIM
PT-GS-16	PT-GS-16-RIM
PT-GS-PD	PT-GS-PD-RIM
