## AUG ENHANCED PORT COVER INSTALLATION INSTRUCTIONS

**Warning: Always verify your rifle is unloaded prior to installing any parts!**

The Tavor 7 Enhanced Port Cover is compatible with the following firearms:

Steyr AUG stocks with dual ejection ports

The following is included in the kit:

- (1) Outer Port Cover
- (1) Inner Port Cover
- (2) 8-32 x 3/8" flat head screws
- (1) 3/32" allen wrench

You will need the following tools:

Optional small flathead screwdriver

### STEP 1:

Remove Bolt Carrier Group from the firearm.

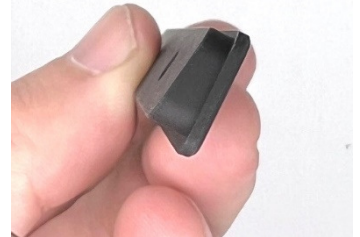

### STEP 2:

Pry up the front or rear edge of the OEM plastic outer port cover with your finger or with a small flathead screwdriver. Pull the plastic outer port cover towards the lifted edge. The sheet metal inner cover will likely fall into the interior of the stock when the outer cover is fully removed. Take both pieces and store in a safe place.

### STEP 3:

Take the Inner Port Cover and note that it has a lip around the outer edge and a raised surface with an angled top. The raised surface will face the outside of the stock with the thicker portion at the bottom edge. Place the Inner Port Cover inside the stock and press into the ejection port you plan to seal closed. In most stocks the Inner Port Cover will press fit into place and stay, but if it does not, just hold it in place.

### STEP 4:

Place the Outer Port Cover with text facing the correct way on the outside of the stock. Thread the two screws into the holes partway first to help align them, then tighten each of them down snugly hand tight.

### STEP 5:

Install the bolt carrier group back in the rifle and cycle the action to verify the bolt carrier group does not bind or catch on the Inner Port Cover. If installed and seated properly, there should be no contact between the bolt carrier group and inner cover. Your AUG Enhanced Port Cover is now installed!
