

# MEPRO GLS

## Self-Illuminated Reflex Sight for 40mm Grenade Launcher

The Mepro GLS 40 mm grenade launcher sight system offers accurate targeting from 50 to 400 meters (54-420 yards).

Traditional grenade sights struggle with accuracy, especially in low light. The Meprolight® design features a dual-illuminated optic that works day or night in all weather, powered by a self-illuminated system that lasts for years without batteries.

With MIL-SPEC durability and large eye relief, users can acquire targets quickly with both eyes open, improving hit probability. The sight compensates for grenade spindrift, ensuring high accuracy. It's lightweight, compact, and compatible with Picatinny rails using three mounting adaptors.

A true technological breakthrough, the Mepro GLS makes aiming simple: just superimpose the illuminated dot on the target and engage.

## PROVEN ADVANTAGES

- Internal drift compensator
- Improved 1st hit probability
- Fiber-Optic/Tritium Powered
- No batteries required
- Multiple mounting options available
- MIL-STD 810 rated

## SPECS

- Eye Relief: 0-300 mm
- Field of View: Unlimited (with both eye open)
- Range: 50-400m
- Resolution: Increments of 25m
- Dot Size: 12 MOA
- Dot Intensity: Variable (Automatic)
- Drift Compensation: Built-in
- Dimensions (L x W x H): 65 x 50 x 52 mm (w/o adaptor)
- Environmental: MIL-STD-810
- Mounting Options: Top rail Picatinny adaptor, Left side adaptor, Combined rail adaptor
