FC-MRX and FC-MRX (MOA)

FC-MRX (MOA)

Applications:

- Competition
- Hunting
- Field / Tactical

Features:

- Daylight bright first focal plane reticle
- 0.2MRAD (0.75MOA) center dot provides a precise aiming point
- 20MRAD (64MOA) grid allows simultaneous elevation and wind holds

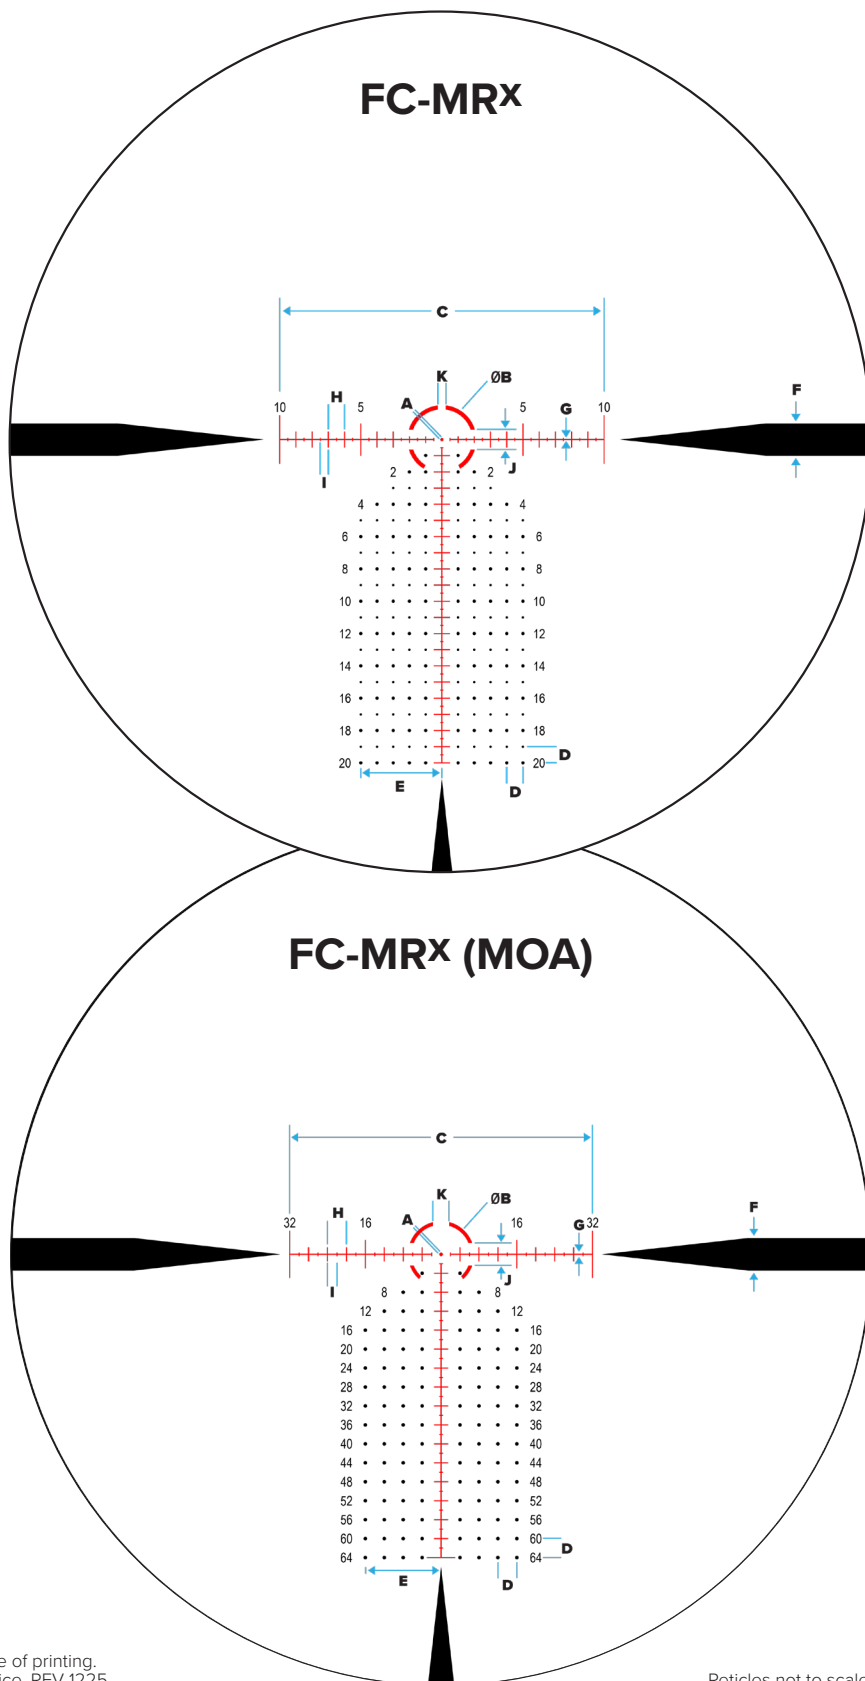

Reticle

FC-MR^x & FC-MR^x (MOA)

The FC-MR^x™ is optimized for the magnification range of the NX6 2-12×42mm F1 riflescope. The segmented center circle and bold outer lines enable fast target acquisition at low power. The Digillum™-driven illumination offers tailorable brightness, overpowering sunny conditions, and dimming capabilities for use in low-light environments. At high magnification, the open center circle design allows for better target visibility and situational awareness. The 1MRAD aiming grid extends to 20MRAD (64MOA) for precise elevation and windage holds at distance.
