Field Tested

How We Tested Them:

Six of us took the best new glasses on the market and went hiking in Colorado, cross-country skiing in Minnesota, elk hunting in New Mexico, and so on-with multiple stream dunkings along the way. These four performed the best.

80 BUYER'S GUIDE OUTSIDE 2010

Birding on the Cheap

Pentax DCF NV \$219

Perfect for the neophyte birder who wants quality glass without blowing his inheritance. The DCF NV's semi-compact design was fast on the draw, and the rubberized exterior helped protect them from inclement weatherand more than one clumsy drop. Their 16mm eye relief allowed for comfortable, strain-free viewing with or without glasses, and the multicoated lenses and phase-coated, super-reflective prisms provided great image contrast-meaning you'll be able to distinguish that yellow-

General Scoping

Redfield Rebel \$150

Acquired by elite optics company Leupold & Stevens in 2009, Redfield is back this year with the Rebel, an ergonomic and economical binocular that's a great all-around choice. The fully multicoated lenses stood up well to repeated stream drops and didn't fog up in cold-weather testing, plus an armored aluminum body provided unmatched durability-part of the reason they come with such a great limited lifetime warranty. 10x42; redfield.com

Traveling Light

Brunton Epoch Compact \$895

These pocket-friendly glasses proved their worth on a trip down under, where spotting honeyeaters and musky rat kangaroos was easy. On our test back home, they were the best small binocs of the bunch, with tight, clean images, thanks to top-of-the-line SF prism glass and a light (13.5 oz) but substantial feel in-hand. The price tag is big for such a small package, but the clarity is worth it. 8x21; brunton.com

Mountain Stalking
