C230GP

LIL' NATIVE® COMPRESSION LOCK

SIGNATURE SERIES

The Native folder has been a backbone of Spyderco's American-made product line for decades. Now all the evolved performance features of this admired design have been concentrated into a smaller, compact adaptation with a 2.5-inch blade called the Lil' Native. The Lil' Native is available with a choices of locking mechanisms, a Compression Lock™ or traditional back lock. Both variations feature full-flat-ground CPM®S30V® stainless steel blades with a prominent index-finger choil that flow seamlessly into the contours of the textured G-10 handle scales. The result is a compact, ergonomic package that still offers a full, four-fingered grip and excellent control. The Lil' Native C230G is crowned with an open-backed high-strength Compression Lock mechanism. The Lil' Native Back Lock, C230MGB, flaunts a full backspacer, linerless handle and a precision-machined high-strength back lock mechanism. Both are equipped with broad-based four-position pocket clips which allow them to be arranged for left or right-side tip-up or tip-down carry and, with their many features, make them a pleasure to carry with completely ambidextrous use.

TECH SPECS
