WATERWAY™

SALT FIXED BLADE

Lance Clinton, known as “Surfingrigo” on the Spyderco Knife Forums, is a passionate fisherman, watersportsman, and knife enthusiast living the dream in Costa Rica. Based on his experience, fishing daily with knives from a kayak, he designed the WaterWay—a highly capable fixed-blade knife and a notable addition to Spyderco’s burgeoning Salt Series line. It is crafted from rustproof LC200N steel, a high nitrogen, alloyed tool steel that is produced using PESR technology, pressurized Electroslag remelting. The process increases the alloy’s cleanliness and refines its micro-structure. LC200N, also known as Cronidur 30, has been used by NASA in the past for ball bearings. The WaterWay’s blade has a full-flat grind, a distal taper, and an integral lower guard. Surrounding the full-tang blade are contoured, black G-10 scales, held in place with non-visible internal pins. A milled CNC-machined texture pattern on both scales provides a solid grip both in and out of water. Ideal for cleaning fish and a myriad of water-born chores, the WaterWay comes with a custom-molded foldover-style Boltaron® sheath with a multi-positional G-Clip mount.

TECH SPECS

BLADE STEEL LC200N Rustproof Steel
BLADE GRIND Full-Flat
LOCK TYPE N/A
HANDLE MATERIAL Black Machined Textured G-10
CARRY N/A

CLOSED LENGTH	N/A
OVERALL LENGTH	9.47 in / 241 mm
BLADE LENGTH	4.40 in / 112 mm
EDGE LENGTH	4.05 in / 103 mm
BLADE THICKNESS	0.132 in / 3.4 mm
WEIGHT	4.7 oz / 133 g
ORIGIN	USA
